Sunny Day assignment

1- It's required to create a PHP script that has a drop down menu of all Egyptian cities, when the user chooses a city he get a report of it's weather that includes temperature (min and maximum and humidity)
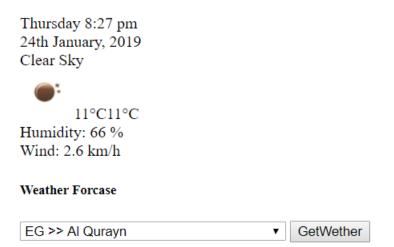

2- **Before submit**

Weather Forcase

3- **After submit**

Disuq Weather Status

Thursday 8:27 pm
24th January, 2019
Clear Sky

11°C11°C
Humidity: 66 %
Wind: 2.6 km/h

Weather Forcase

4- Use cURL for getting the weather information
5- Repeat the same behaviour using Guzzle (Don't forget to use composer)

Bonus :

1. Make the project in oop .

Help :

Use the following link that has all cities in the world by the documentation of open weather

http://cutescripts.net/api/city.list.json

get the json locally and use it as a text file .

The API url :

Don't forget that you need to register to the API and will have the URL to call and the options to use including the API key

https://openweathermap.org/api

Finally there is attached an oop skeleton for the solution , you can use it , it will ease things for you

More Help :

1) You need json_encode($any_thing) to convert any thing to JSON
2) YOU need json_decode($any_json) to convert any json to object
3) YOU need json_decode($any_json,true) to convert any json to array

Good Luck ☺☺
